

Google Meet Tips for Participants

Microphone and Camera Check

When you click the meeting link, if your browser asks for permission to use your camera and microphone, be sure to click **Allow**.

If your microphone or video isn't working once you are in:

1. Look at the top of your screen, next to the web address (on the left).
2. Click the **Padlock (🔒)** icon.
3. Make sure **Microphone** and **Camera** are both set to **Allow**.

If you still see a message that the camera is blocked by the system, you need to update your laptop settings:

- **For Mac:** Go to **System Settings > Privacy & Security > Camera** (and **Microphone**) and make sure your browser (e.g., Chrome, Safari) is turned on.
 - **For Windows:** Go to **Start Menu > Settings > Privacy & Security > Camera**. Ensure **Camera access** is toggled **On**, and scroll down to make sure **Let desktop apps access your camera** is also toggled **On**. (Repeat these steps for the **Microphone**).
-

Make the Presentation / Screen Bigger

If my shared screen or presentation looks too small on your laptop, use the **More options** menu (the three vertical dots at the bottom of your screen) to make these two quick adjustments:

1. **Go Full Screen:** Click **More Options** > click **Full screen**. *(The menu will automatically close, and the meeting will fill your entire screen. Press the **Esc** key on your keyboard at any time to exit the Full Screen).*
2. **Hide Other Participants:** Click **More Options** again > click **Adjust view** > select **Spotlight**. This will completely hide everyone else and force the presentation to fill your view.
